MRT

What is MRT?

Moral Reconciliation Therapy (MRT) is the premiere cognitive-behavioral program for substance abuse treatment and for criminal justice offenders. Developed in 1985 by Gregory Little, Ed.D., and Kenneth Robinson, Ed.D., more than 120 published reports have documented that MRT-treated offenders show significantly lower recidivism for periods as long as 20 years after treatment. Studies show MRT-treated offenders have re-arrest and reincarceration rates 25% to 75% lower than expected.

MRT programs are used in 49 states, District of Columbia, Puerto Rico, and four countries. A 1999 report by the Washington State Institute for Public Policy estimated that the combined cost benefit to taxpayers and crime victims for the MRT program results in an \$11.48 cost benefit for every dollar spent.

MRT is a cognitive-behavioral counseling program that combines education, group counseling, and structured exercises designed to foster moral development in treatment-resistant clients.
